

Getting Started

Before doing installation, you need to do the following things :

1. Have a web hosting to store admin panel files and SQL database. Because this documentation using cpanel, a web hosting with cpanel is recommended. If you don't have web hosting or domain, you can check on this sample site which provide hosting and domain service :
 - [Sample 1](#)
 - [Sample 2](#)
 - [Sample 3](#)
2. Install tools that requires for developing Android app such as :
 - [Java Development Kit](#)
 - [Android Studio](#) as the Official Android IDE.
3. For updated tutorial about how to install them, you can see and Download from [Android Developer website](#).
4. If you do all things above, you can go to the next step.
